

THE CLAIMS

What Is Claimed Is:

- 5 1. A method of forming an iridium-containing film on a substrate, from an iridium-containing precursor thereof that is decomposable to deposit iridium on the substrate, said method comprising decomposing the precursor and depositing iridium on the substrate in an oxidizing ambient environment.
- 10 2. The method according to claim 1, wherein the oxidizing ambient environment comprises an atmosphere containing an oxidizing gas selected from the group consisting of oxygen, ozone, air, and nitrogen oxide.
3. The method according to claim 1, wherein the iridium deposited on the substrate
15 comprises elemental iridium.
4. The method according to claim 1, wherein the iridium deposited on the substrate comprises iridium oxide, or a combination of iridium and iridium oxide.
- 20 5. The method according to claim 1, wherein the precursor comprises a composition selected from the group consisting of:

I

wherein R and R' may be alike or different and may be H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and L is a coordinating Lewis base; and

5

Lewis base stabilized Ir(I) β -ketoiminates of formula II:

11

10

wherein R, R', and R'' are the same or different, and are independently selected from the group consisting of H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and L is a coordinating Lewis base.

15 6. The method according to claim 5, wherein the coordinating Lewis base is selected

tetraamine, ether, tetrahydrofuran, glyme, diglyme, triglyme, tetraglyme, phosphine, carbonyl, dialkyl sulfide, vinyltrimethylsilane, and allyltrimethylsilane.

7. The method according to claim 1, wherein the oxidizing ambient environment
5 comprises air.
8. The method according to claim 1, wherein the decomposition of the precursor and deposition of iridium on the substrate is carried out by a process selected from the group consisting of chemical vapor deposition (CVD), assisted-CVD, ion plating, rapid thermal
10 processing, and molecular beam epitaxy.
9. The method according to claim 1, wherein the precursor comprises a composition selected from the group consisting of:
- 15 Lewis base stabilized Ir(I) β -diketonates of formula I:

I

10. The method according to claim 9, wherein the coordinating Lewis base is selected from the group consisting of alkene, diene, cycloalkene, cyclodiene, cyclooctatetraene, alkyne, substituted alkyne (symmetrical or asymmetrical), amine, diamine, triamine, tetraamine, ether, tetrahydrofuran, glyme, diglyme, triglyme, tetraglyme, phosphine, carbonyl, dialkyl sulfide, vinyltrimethylsilane, and allyltrimethylsilane.

11. The method according to claim 1, wherein the precursor comprises a composition selected from the group consisting of:

10 Lewis base stabilized Ir(I) β -ketoiminates of formula II:

II

wherein R, R', and R'' are the same or different, and are independently selected from the group consisting of H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and L is a coordinating Lewis base.

12. The method according to claim 11, wherein the coordinating Lewis base is selected from the group consisting of alkene, diene, cycloalkene, cyclodiene,

tetraglyme, phosphine, carbonyl, dialkyl sulfide, vinyltrimethylsilane, and allyltrimethylsilane.

13. The method according to claim 1, wherein the decomposition of the precursor and
5 deposition of iridium on the substrate is carried out by chemical vapor deposition.

14. The method according to claim 1, wherein the iridium deposited on the substrate
is processed to yield an iridium-containing film element on the substrate, having critical
dimensional characteristics below about 0.5 micron.

10

15. The method according to claim 14, wherein the decomposition of the precursor
and deposition of iridium on the substrate is carried out by chemical vapor deposition.

16. A method of forming a microelectronic device or precursor structure on a
15 substrate, including an electrode operatively associated with a high-temperature dielectric
or ferroelectric material deposited thereover, said method comprising:

(A) forming an iridium-containing film on the substrate, from an iridium-
containing precursor thereof which is decomposable to deposit iridium on the substrate,
20 comprising:

(i) decomposing the precursor and depositing iridium on the substrate in

(ii) processing the deposited iridium into an iridium-based electrode element; and

(B) depositing on the iridium-based electrode element a high temperature
5 dielectric and/or ferroelectric material.

17. The method according to claim 16, wherein the iridium-based electrode element has deposited thereon a high temperature dielectric material.

10 18. The method according to claim 16, wherein the iridium-based electrode element has deposited thereon a high temperature ferroelectric material selected from the group consisting of SBT and PZT.

15 19. The method according to claim 16, wherein the microelectronic device or precursor structure comprises a DRAM or FRAM capacitor device or structure.

20. The method according to claim 16, wherein the high temperature dielectric and or ferroelectric material comprises a material selected from the group consisting of SBT, PZT, BST, PLZT, PNZT, and LCMO.

20

21. The method according to claim 16, wherein the iridium deposited on the substrate

22. The method according to claim 16, wherein the iridium deposited on the substrate comprises iridium oxide or a combination of iridium and iridium oxide.

23. The method according to claim 16, wherein the precursor comprises a composition selected from the group consisting of:

Lewis base stabilized Ir(I) β -diketonates of formula I:

I

10

wherein R and R' may be alike or different and may be H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and L is a coordinating Lewis base; and

Lewis base stabilized Ir(I) β -ketoiminates of formula II:

II

15

wherein R, R', and R'' are the same or different, and are independently selected from the group consisting of H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and L is a coordinating Lewis base.

5 24. The method according to claim 23, wherein the coordinating Lewis base is selected from the group consisting of alkene, diene, cycloalkene, cyclo diene, cyclooctatetraene, alkyne, substituted alkyne (symmetrical or asymmetrical), amine, diamine, triamine, tetraamine, ether, tetrahydrofuran, glyme, diglyme, triglyme, tetraglyme, phosphine, carbonyl, dialkyl sulfide, vinyltrimethylsilane, and
10 allyltrimethylsilane.

25. The method according to claim 23, wherein the oxidizing ambient environment comprises air.

15 26. The method according to claim 16, wherein steps (A)(i), (A)(ii) and (B) are carried out in the same oxidizing ambient environment.

27. A microelectronic device structure comprising an iridium oxide electrode element formed in an oxidizing ambient environment and overlaid by a high temperature
20 dielectric, wherein the electrode is conductively operative in relation to the high temperature dielectric.

28. The microelectronic device structure according to claim 27, wherein the high temperature dielectric comprises a material selected from the group consisting of SBT, PZT, BST, PLZT, PNZT, and LaCaMnO_3 .

5 29. The microelectronic device structure according to claim 27, wherein the high temperature dielectric comprises SBT.

32. (Amended) A composition comprising an organic solvent solution of an Ir(I) reagent, wherein said Ir(I) reagent is selected from the group consisting of:

10

Lewis base stabilized Ir(I) β -diketonates of formula I:

15

wherein R and R' may be alike or different and may be H, aryl, perfluoroaryl, $\text{C}_1 - \text{C}_6$ alkyl, or $\text{C}_1 - \text{C}_6$ perfluoroalkyl, and L is a coordinating Lewis base; and

II

wherein R, R', and R'' are the same or different, and are independently selected from the
 5 group consisting of H, aryl, perfluoroaryl, C₁ - C₆ alkyl, or C₁ - C₆ perfluoroalkyl, and
 L is a coordinating Lewis base, wherein the coordinating Lewis base is selected from the
 group consisting of alkene, diene, cycloalkene, cyclodiene, cyclooctatetraene, alkyne,
 substituted alkyne (symmetrical or asymmetrical), amine, diamine, triamine, tetraamine,
 ether, tetrahydrofuran, glyme, diglyme, triglyme, tetraglyme, phosphine, carbonyl,
 10 dialkyl sulfide, vinyltrimethylsilane, and allyltrimethylsilane.
